Direct Asset Transfer

Archive Sync'd Transfer Utility

Normally Synced transfers are archived automatically as follows

- Outgoing transfer - out and final returned - IS NOT ARCHIVED
- Incoming transfer - out and final returned - BOTH OUTGOING and INCOMING are archived

- Outgoing transfer - out and partial returned
- Incoming transfer - out and final returned - BOTH not archived until outgoing is final returned

The Archive Synced Transfers utility resolves an issue with sync'd transfers in versions earlier than 12.1.9.1. When executed (with the correct archive permissions) it will

- archive any final returned outgoing transfers where the incoming transfer has already been archived OR
- archive fully returned pairs of outgoing/incoming transfers that have not archived.
