

Format Phone Numbers

Last Modified on 09/06/2017 4:50 pm EDT

The Format Phone Numbers utility is used to format existing phone numbers in the system to a format specified by the operator. The utility helps to standardize how RentalPoint stores numbers. For example, some phone numbers have the area code mixed into the main number, others have the area code separate. When trying to use templates the numbers might not display correctly. This utility creates a standard between the two.

RP **Format Phone Numbers** X

Number Lengths

Country Code Length	<input type="text"/>	<input type="checkbox"/> Update Phone 1
Area Code Length	<input type="text"/>	<input type="checkbox"/> Update Phone 2
Phone Number Length	<input type="text"/>	<input type="checkbox"/> Update Cell
Extension	<input type="text"/>	<input type="checkbox"/> Update Fax
