

# Stock Report

Last Modified on 03/06/2022 3:02 pm EDT

The Stock Report assists users during an inventory count or stock take by providing the current stock value of inventory for the date and time the report is run. Current bookings and transfers are accounted for on the report. If equipment is checked out on a booking or transfer then the report will take into account that the equipment is out of the location/warehouse.

Narrow the search to any group/category/product if needed.

For multi-location users, click 'consolidated' to count across locations.
