

# Asset - Due for Service Report

Last Modified on 01/04/2026 3:45 pm EDT

This Report is Based on Asset Usage since the Last Test Date

This report identifies assets that have met or exceeded their allowed usage and are due for servicing, helping to quickly highlight equipment that is due or overdue for service based on actual usage.

Equipment Due for Servicing

Location : 0 - Toronto

Asset code	Description	Product Code	Stock Number	Serial number	Days in Service	Days before date last serviced	Date last serviced
SS3	Standard Microphone	MIC1	1		1	1	26/01/01
MON253-1	Monitor 25"	mon253	1		2	2	26/01/01
100201	Wireless Antenna Directional 450-960MHZ	F10031	2		1	1	26/01/01

## How it works

- Calculates total **Days in Service** from asset movement records ( `tblAssetran` )
- Includes:
  - Completed rentals (Out → In dates)
  - Same-day usage (counts as 1 day)
  - Ongoing rentals (counts up to the reporting date)
- Only includes usage after the last service date ( `ReturnFromService` )

## Logic

The query compares:

- **Days in Service** vs. **Days Required for Service** ( `Days_req_service` )

Only assets where:

**Usage ≥ Service Threshold**

are returned.

## Filters

- Assets must require servicing ( `Days_req_service > 0` )
- Only assets in location the location the report is run from
